

# Coleman® Roadtrip® Grill ME65 Installation Instructions

Be sure your Coleman® Roadtrip® Grill is NOT connected to a propane fuel source while installing the ME65CL.

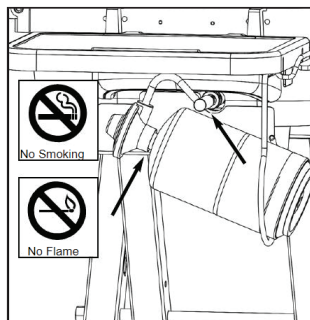

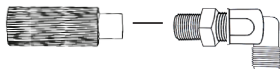

**STEP 1:** Remove the regulator assembly from the grill by unscrewing the brass swivel connector.

**STEP 2:** Separate the regulator assembly into its two components by unscrewing the regulator and metal tube arm from the brass swivel connector with vise-grip pliers or Channel-Lock pliers. Then unscrew the regulator/metal tubing by hand.

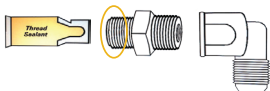

**NOTE:** Be sure to keep the spring and back flow stopper that is inside the swivel connector in place.

**NOTE:** Due to a recent change to the Coleman Roadtrip grills you may require a different fitting to adapt the ME65CL kit to the grill. Do a quick test to see if the male threads (included in the kit) fit the grills brass swivel connection that was attached to the grill. If they fit together, move to step 3-4. If they do not fit together move to steps 5-7.

**STEP 3:** If they fit together well, disconnect again and apply thread sealant (supplied in the kit) to the male threads of the ME65CL brass fitting (also supplied in the kit).

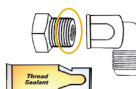

Now you can install the ME65CL fitting onto the brass swivel connection that was previously confirmed to fit. Tighten with a wrench. Turn until snug, plus 1/4 turn.

**STEP 4:** Install the brass swivel connection piece with ME65CL attachment into the rear of the grill. Continue to STEP 9.

**STEP 5:** If the connections shown in step 3 DO NOT fit together, you need to unscrew the brass ME65CL fitting into its three components and remove the two that look like this

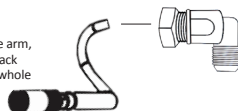

**STEP 6:** Apply thread sealant to the male threads on the extra adapter (applied in the kit) and attach to the elbow adapter. Tighten with a wrench. Turn until snug, plus 1/4 turn.

**STEP 7:** Now take the new assembly you have just created and attach it to the curved end of the metal tube arm that was detached from the grill's regulator, using thread sealant on the threads once again.

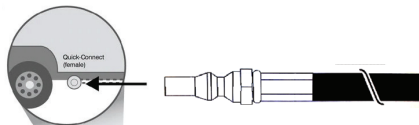

**STEP 8:** On the other end of the tube arm, attach the brass swivel connection back into place. Then you may install the whole assembly onto the rear of the grill.

**STEP 9:** Attach the 3/8" Female Swivel Flare end of the 12' hose provided in the ME65CL kit to the male 3/8" flare end ME65CL attachment at the rear of grill. Tighten with a wrench. DO NOT USE THREAD SEALANT ON THIS CONNECTION!!

**STEP 12:** Insert the male end of the ME65CL hose assembly into female quick-connect fitting of the RV.

**STEP 10:** Be sure the gas control knob of your grill is in the off position.

**STEP 11:** If your RV has a shut-off valve as part of the quick-connect system, move it to the off position.

**STEP 13: CHECK ALL CONNECTIONS FOR LEAKS** by thoroughly soaking each connection with leak detect solution (included in the kit). Be sure that the main propane supply on your RV is on at this time and if applicable, open valve at your RV's quick-connect port. If the connection leaks, the leak detector will bubble within 5-20 seconds. Turn off the propane supply immediately and tighten the leaking connections. Repeat the Safety Leak Check until you no longer see evidence of a gas leak.

**Always check your connections for leaks prior to using any propane products!!!**
