

Weight Distribution

What is a weight distribution hitch?

- A weight distribution hitch improves vehicle and trailer control by more evenly distributing the tongue weight of the trailer across all axles of the vehicle-trailer combination.

Sway Control

- Most of our weight distribution hitches are designed to be used in combination with a sway control unit to help reduce unwanted lateral movement in the trailer, caused by the wind or a passing vehicle.
- A sway control attaches to the WD hitch and the trailer and uses an abrasive pad to resist trailer sway. Two sway control units should be used to maximize control and stability.
