

# Part Install Instructions

## RV AC Soft Start Kit

**Overview** – Add the Micro-Air EasyStart model ASY-364-X36-UL to help with starting the RV A/C system when using a generator.

**IMPORTANT SAFETY NOTICE**

The information in this part instruction is intended for use by individuals possessing adequate backgrounds of electrical, electronic and mechanical experience. Any attempt to repair a major appliance may result in personal injury and property damage. The manufacturer or seller cannot be responsible for the interpretation of this information, nor can it assume any liability in connection with its use.

**WARNING**

To avoid personal injury, disconnect power before servicing this appliance. If electrical power is required for diagnosis or test purposes, disconnect the power immediately after performing the necessary checks. RECONNECT ALL GROUNDING DEVICES If grounding wires, screws, straps, clips, nuts, or washers used to complete a path to ground are removed for service, they must be returned to their original position and properly fastened.

### Parts Included:      Parts Required:

- Instruction Sheet
- Micro-Air EasyStart model: ASY-364-X36-UL (<https://www.microair.net>)
- Only use UL recognized components.

**Wear proper PPE for the job (safety glasses, cut resistant gloves...)**

Step 1 - Disconnect power at the main breaker & battery. Shutoff circuit breaker for A/C unit.

Step 2 - Remove outdoor cover screw (4x) and remove outdoor shroud cover.

Step 3 - With power disconnected, remove the (5x) screws holding the capacitor cover. Lift off the cover. The capacitor may hold an electrical charge, discharge capacitor by placing an insulated screwdriver across the capacitor terminals.

# Overview – RV AC Soft Start Kit

Step 4 – Crimp the appropriate spade terminals onto the EasyStart system as needed and as instructed in the EasyStart installation manual. Feed the EasyStart cord between the capacitor bracket & fan motor bracket. Connect the Micro-Air EasyStart (ASY-364-X36-UL) wires as follows:

- 4A. Connect the BLACK (EasyStart) wire to the 4-pin terminal block with the other BLACK wires. The BLACK wire needs a female 1/4" spade.
- 4B. Connect the ORANGE (EasyStart) wire to the Compressor side (H) of the Run Capacitor, next to the RED wire. The ORANGE wire needs a female 1/4" spade.
- 4C. Disconnect the WHITE (Compressor) **14awg** wire from Run Capacitor (C), & connect it inline with the BROWN (EasyStart) wire. The BROWN wire needs an insulated male 1/4" spade.
- 4D. Connect the WHITE (EasyStart) wire to the Neutral side (C) of the Run Capacitor, next to the WHITE wires. The WHITE wire needs a female 1/4" spade.

Before Connecting EasyStart

After Connecting EasyStart

# Overview – RV AC Soft Start Kit

Step 5 – Route the EasyStart wires around the capacitor bracket, under & between the motor bracket so that the excess wires are bundled away from the axial fan blade (see pictures below).

Step 6 – All new connections from Step 4 must be secured inside the capacitor cover enclosure. While ensuring there are no pitched wires, replace the capacitor cover and screws (5x).

Step 7 – Mount the EasyStart system to the metal capacitor enclosure with zip-ties, bundle and secure extra EasyStart wiring, see photo below...

Step 8 – Replace the Outdoor Shroud Cover, Screws (4x), and restore electrical power.
