

LEVELING AND STABILIZATION

The Lippert Components, Inc. Electric Landing Gear Switch and Harness is supplied stock with a 30A inline fuse on the power lead to the switch.

It is acceptable for the 30A fuse to be removed and replaced with a 30A manual circuit breaker. If any of the wiring is removed and discarded along with the fuse, exact gauge and quality wire **MUST** be used to replace the preexisting wire.

Replacing the 30A fuse with the 30A manual circuit breaker does not void Lippert Components, Inc. Limited Warranty and is RVIA compliant. However, in the event of the system becoming inoperative or damaged initiating from the condition, quality or installation of the 30A manual circuit breaker, the liability lies with the installer of the breaker.

It is understood that this revision can be performed under the permission of Lippert Components, Inc. but is not a recommended operation or replacement.

As a supplier of components to the RV industry, safety, education and customer satisfaction are our primary concerns. Should you have any questions, please do not hesitate to contact us at (574) 537-8900 or by email at customerservice@lci1.com. Self-help tips, technical documents, product videos and a training class schedule are available at lci1.com or by downloading the MyLCI app.
