

POWER AND MOTION

Purpose

To apply a quality liquid or gel lubricant when necessary to the surfaces where the sprockets contact the inner bearing.

Safety

⚠ CAUTION

Always wear eye protection when performing service or maintenance to the unit. Other safety equipment to consider would be hearing protection, gloves and possibly a full face shield, depending on the nature of service.

⚠ CAUTION

Moving parts can pinch, crush or cut. Keep clear and use caution.

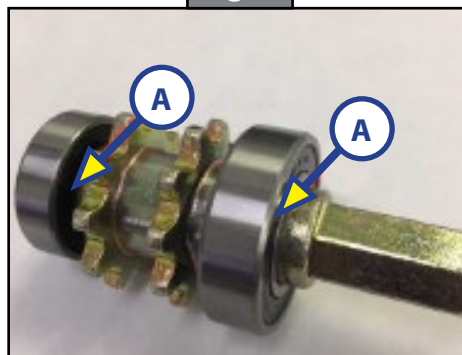

Resources Required

- Lubricant
- Lubricant tube applicator
- Lint-free cloth

Instructions

NOTE: Fig. 1A highlights the target areas for the lubricant. It is possible to directly apply the lubricant with minimal overspray by using a tube applicator.

Fig. 1

POWER AND MOTION

1. Apply lubricant to the bearing installed on the top rail sprocket (Fig. 2A).

NOTE: Aim directly for the surface where the sprocket and the bearing make contact.

2. To lubricate the rear C-channel sprocket, position the lubricant tube applicator between the sprocket and the bearing from beneath (Fig. 3A). Apply lubricant to rear sprocket.

NOTE: The bearing cup is part of the C-channel. If the tube is not properly placed, it is possible to miss the target area (Fig. 4A). Cycle the bed lift 2-3 times to evenly distribute the lubricant. Reapply lubricant if needed. Wipe down any excess lubricant with a clean, lint-free cloth.
