

Installation instructions for Sirio antibug brush kit

1. Remove corner covers
2. Measure the length of the track.

3. Add 72 mm to the track length, that's the needed length of brush.
(e.g.: Track length = 600 mm
 $600 + 72 = 672 \text{ mm} = \text{Brush length needed}$).
4. Cut the needed length of brush, one for each track.
5. Insert the brush in the channel shown in the picture below (i.e. between the sirio track and the handle cap), stop when you hit the handle on the other side.
Check the brush is vertical like in the picture below.

6. Gently push the handle cap you hit before in the direction of the arrow shown below (i.e. away from the track, inward of the product) and then finish pushing the brush inside until you reach the end of the product.

7. Center the brush on the track, in order to have 36 mm of brush getting out on each side of the track.

8. Be sure the brush is in vertical position as shown before on point n° 5.
9. Apply corner covers and you are ready to go.

As a supplier of components to the RV industry, safety, education and customer satisfaction are our primary concerns. Should you have any questions, please do not hesitate to contact us at 432-LIPPERT (432-547-7378) or by email at customerservice@lci1.com. Self-help tips, technical documents, product videos and a training class schedule are available at lippert.com or by downloading the LippertNOW app.
