

T.I.P. Troubleshooting Information on Power Gear

SLIDE-OUT MOTOR COLOR IDENTIFICATION

In order to better identify slide-out motors, we have designated boot colors in accordance with the motor sizes and applications. When referencing slide-out motors, please note boot colors.

Also, you may notice that newer motors will have an additional shaft on the motor housing slide. This additional shaft is used in center drive applications. This motor can be used in front of rear drive application also.

Note: Interchanging of motors from low, mid or high torque is not recommended. This may result in damage to other slide-out components or to the slide-out system itself.

Boot color	Description	Application
Black or red	High torque	Most flat floors
Gray or Yellow	Mid torque	Most raised floors, single rail or bedroom
White	Low torque	Special
