Solera® Front Shade

Installation and Owner's Manual

(For Aftermarket Applications)

⚠ WARNING

If staking Solera FRONT Shade to the ground, be sure to disable any and all self re-tracking wind sensing options on the awning. Failure to do so could result in damage to the awning and unit.

⚠ CAUTION

Moving parts can pinch, crush or cut. Keep clear and use caution.

Introduction

The Solera® Front Shade can be used on manual or 12V power awnings. The Front Shade can be used on Solera Awnings as well as Carefree Awnings and Dometic Awnings. It simply slides into the open channel of the roll tube. It is perfect for providing additional shade. The open-weave fabric cuts approximately 85% of light for a cool and comfortable shade.

The Solera Front Shade is 6' tall. Additional information about this product can be obtained from www.lci1.com/support or by downloading the free MyLCI app. The app is available on iTunes® for iPhone® and iPad® and also on Google Play™ for Android™ users.

Resources Required

- 1 to 2 persons

Installation

1. Unbox and unfold the Solera Front Shade.
2. Locate the top polycord (plastic cord sewn into the fabric). Trim the polycord so that at least 3" of polycord extends past the fabric on both sides.
3. Locate the open channel in the awning roll tube that is accessible through the end cap.
4. Remove or slide the pull strap to the opposite side of the roll tube (if applicable). Check the roll tube channel to make sure there are no sharp edges that can snag or tear the fabric.

Notes

8. To remove the Front Shade for storage, remove the tie downs and stakes and slide the shade out of the roll tube channel. Fold to fit in the storage bag provided.

Please recycle all obsolete materials and contact Lippert Components with concerns or questions.
