Introduction

The Tokyo Bed is an overhead-mounted bed designed with variations for ceiling or wall mounting in the driver's compartment of the vehicle. The bed has gas-actuated cylinder arms to assist in the lowering and raising of the bed platform.

NOTE: Images used in this document are for reference only when assembling, installing and/or operating this product. Actual appearance of provided and/or purchased parts and assemblies may differ.

Safety

Read and understand all instructions before installing or operating this product. Adhere to all safety labels.

This manual provides general instructions. Many variables can change the circumstances of the instructions, i.e., the degree of difficulty, operation and ability of the individual performing the instructions. This manual cannot begin to plot out instructions for every possibility, but provides the general instructions, as necessary, for effectively interfacing with the device, product or system. Failure to correctly follow the provided instructions may result in death, serious personal injury, severe product and/or property damage, including voiding of the Lippert limited warranty.

WARNING

The "WARNING" symbol above is a sign that a procedure has a safety risk involved and may cause death or serious personal injury and/or severe product and property damage, including voiding of the component warranty if not performed safely and within the parameters set forth in this manual.

CAUTION

The "CAUTION" symbol above is a sign that a safety risk is involved and may cause personal injury and/or product or property damage if not safely adhered to and within the parameters set forth in this manual.

CAUTION

Always wear eye protection when performing service, maintenance or installation procedures. Other safety equipment to consider would be hearing protection, gloves and possibly a full face shield, depending on the nature of the task.

CAUTION

The "CAUTION" symbol above is a sign that a safety risk is involved and may cause personal injury and/or product or property damage if not safely adhered to and within the parameters set forth in this manual.

⚠ CAUTION

Moving parts can pinch, cut or crush. Keep clear and use caution.

Resources Required

- 2-3 persons depending on task
- Cordless or electric drill or screw gun
- Appropriate drive bit
- #8-18 x 1.00" Self-drilling screws
- Tape measure

Installation

Ceiling-mount Bed

1. With assistance, dry-fit the closed bed assembly (Fig. 1) flat against the ceiling in the installation location.

Fig. 1

2. Position bed mounting rails equally distant from the front seam of the ceiling (Fig. 2A).
3. Keep bed mounting rails flat against the ceiling and parallel to each other (Fig. 2).

Fig. 2

4. Collapse the bed so that it is in the closed position.
5. Use a tool long enough with the appropriate drive bit for the OEM-supplied self-drilling screws (Fig. 3A) to ensure proper securing of the bed mounting rails.
6. Install self-drilling screws in all accessible holes of both mounting rails to make sure the bed is secure and safe.
7. Remove the support and position the bed in the lowest position. Place a load on the bed to make sure the bed remains stable while in its lowest position.
8. Complete installation of the self-drilling screws in the remaining mounting holes.

Fig. 3

Wall-mount Bed

1. With assistance, dry-fit the closed bed assembly (Fig. 4) flat against each wall in the front of the unit.

2. Position bed mounting rails;
 - A. Equally distant from the ceiling (Fig. 5A) so that approximately an 1/2" minimum gap exists between the ceiling and the top of the mounting rail spring assemblies.
 - B. Equally distant from the front wall (Fig. 5B) to allow for the bed's range of motion.

3. Keep bed mounting rails level and flat against the walls.
4. Use a cordless or electric drill or screw gun with the appropriate drive bit for the OEM-supplied self-drilling screws (Fig. 6A) to secure the bed mounting rails.
5. Install self-drilling screws in all holes of both mounting rails.

Fig. 6

Post-installation Check

1. Check for loose mounting rails. Make sure mounting rails are tight and flat against the mounting surface.
2. Check for loose screws. Make sure all mounting screws are fully installed.
3. Check bed's range of motion for freedom from any interference. Pull the bed down to its fully open position, then push it upwards into its fully closed position.
4. Make sure extension arms and gas struts do not bind when the bed is operated in either direction.
