How to Measure for Window Roller Shades

Here is an easy to follow guide to measuring for your custom MCD RV window roller shades.

1. **Width** — Measure the **INSIDE** width of the valance as close to the top as possible. **Deduct** a minimum of **.5 inches** total to provide clearance space for installation. (For a shade that is NOT mounted in a valance, provide the exact width of shade assembly you desire.)
2. **Upper Set Limit** — Measure from the **INSIDE** top of the valance, or mounting position, to the **upper point**, where you want the bottom of the shade to stop when it is raised. This upper set limit will be pre-set.
Minimum for a Duo Roller Shade is 5 inches and a Solo Shade is 3.5 inches
3. **Drop Length** — Measure from the **INSIDE** top of the valance, or mounting position, to the bottom of the window frame.

NOTE: You will need at least two (2) inches of extra space for the shade to roll freely inside a valance. Final product tolerance for shade width is +/- .25 inch per shade. All MCD Roller Shades are custom-made and are not returnable.

More information is provided on the American Duo Roller Shade (/american-duo) Order form. If you have additional questions, please call 800.804.1757 or Contact MCD (/contact-mcd).
